### Analytical Chemistry Of The Actinide

The Actinide Analytical Chemistry (C-AAC) Group at the Laboratory provides expertise in chemical and radiochemical analysis of materials where actinide elements, including plutonium and uranium, make up a significant portion of the sample. These analyses range from assay of the major and minor components down to trace analysis of impurities – spanning over seven orders of magnitude of chemical analysis capability.

Actinide chemistry (or actinoid chemistry) is one of the main branches of nuclear chemistry that investigates the processes and molecular systems of the actinides. The actinides derive their name from the group 3 element actinium. The informal chemical symbol An is used in general discussions of actinide chemistry to refer to any actinide.

In the last 20 years actinide research has presented unique challenges both for experimentalists and theorists. Their uniqueness stems not only from their nuclear properties, which since the early 1940's have led to their important role in nuclear energy and nuclear technology, but also from their unusual chemical and physical properties which have added new excitement and discoveries to both these disciplines.
