4 1. COMPLEX

FUNCTIONS Exercise 1.

8. Consider the set of symbols $x+iy+ju+kv$, where x, y, u and v are real numbers, and the symbols i, j, k satisfy $i^2 = j^2 = k^2 = -1, ij = ji = k, jk = ik = i$ and $ki = ik = j$. Show that using these relations and calculating with the same formal rules as in dealing with real numbers, we obtain a skew field;

number z we denote by $\arg(z)$ the set of its arguments, i.e. the set of real numbers θ such that $z = r(\cos\theta + i\sin\theta)$. The pair of numbers (r, θ) for $\theta \in \arg(z)$ are also called polar coordinates for the complex number z . More about this will be discussed in Section 5. Every complex number $z = x + iy$ with $x, y \in \mathbb{R}$ has a complex conjugate

to give an extensive description of the classical complex analysis, here "classical" means roughly that sheaf theoretical and cohomological methods are omitted. The first four chapters cover the essential core of complex analysis presenting their fundamental results. After this standard material, the authors step ...
