There is no concept of a "background image" in a JPanel, so one would have to write their own way to implement such a feature.. One way to achieve this would be to override the paintComponent method to draw a background image on each time the JPanel is refreshed.. For example, one would subclass a JPanel, and add a field to hold the background image, and override the paintComponent method:

more complex than the others.

## **Image Steganography Project Source Code and Documentation ...**

I have a JPanel to which I'd like to add JPEG and PNG images that I generate on the fly.. All the examples I've seen so far in the Swing Tutorials, specially in the Swing examples use ImageIcon.. I'm generating these images as byte arrays, and they are usually larger than the common icon they use in the examples, at 640x480.

## **java - How to add an image to a JPanel? - Stack Overflow**

`JFrame frame = new JFrame();` creates a JFrame object, but this line doesn't display the JFrame object anywhere. (The displaying comes later in the code.) An ImageIcon object is a picture. At the root of the program's project directory, there is a file named `androidBook.jpg`. That file contains the picture.
