Abstract Recently, discourse analysis is very popular in analyzing literary text. One of approaches to analyze texts is using transitivity in Systemic Functional Grammar developed by Halliday. Therefore, in this paper, transitivity is employed to analyze the character, Miranda, in Jhumpa Lahiri' short story.

Abstract. We suggest a way of reducing the very high dimension of a functional predictor, X , to a low number of dimensions chosen so as to give the best predictive performance. Specifically, if X is observed on a fine grid of design points t_1, \dots, t_r , we propose a method for choosing a small subset of these, say t_{i_1}, \dots, t_{i_k} , to optimize the prediction of a response variable, Y .

The rule by which such an assignment takes place is said to be a menu dependent preference functional (MDPFL). We extend the concepts of invariance under individual cardinal transformations, weak Pareto, binary independence, weak dictatorship and veto power from the context of social welfare functionals to our framework of MDPFL's.

Krüppel-like factor 8 (KLF8), a cancer-promoting factor that regulates critical gene transcription and cellular cancer-related events, has been implicated in tumor development and progression. However, the functional role of KLF8 in the pathogenesis of hepatocellular carcinoma (HCC) remains largely unknown. The gene expression patterns and genome-wide regulatory profiles of HCC cells after ...

Antimicrobial resistance poses a threat to global health and the economy. It is widely accepted that, in the absence of antibiotics, drug resistance mutations carry a fitness cost. In the case of rifampicin resistance in fast-growing bacteria, this cost stems from a reduced transcription rate of the RNA polymerase resulting in slower ribosome biosynthesis. However, this relationship does not ...
